Disposable Needles for...
Bone Marrow Harvest / Transplantation

- Sterile
- Non-Toxic
- Non-Pyrogenic
The disposable single-patient Lee Needle is specially designed for allogeneic and autologous bone marrow harvest-transplantation procedures.

Please note these features:

- **Comfortable handle**
  The patented handle design incorporates a recessed Luer fitting for a comfortable grip. Plastic handle wings give physician control and serve as a position reference.

- **One-piece stylet**
  The one-piece stylet provides for procedure efficiency and the lock notch assures proper needle/stylet bevel alignment.

- **LUER-LOK™ Hub**
  The Luer fitting provides a secure connection and allows the use of either slip type or Luer locking syringes.

- **Tri-Point Tip**
  The precision tip is sharpened at the 25° bevel to provide a large harvest area.

- **Laser construction**
  Multiple cortical entries require maximum needle strength. The LEE-LOK® stainless steel needles are laser welded to provide a positive lock and insure against slippage or breakage.

- **Versatile size options**
  Transplant-Harvest needles are available in two gauges and three lengths for Pediatric, Adult and Large Adult patients.

- **Sterile packaging**
  LEE needles are blister packaged with easy-peel TYVEK™ for Operating Room presentation, certified Sterile, Non-Toxic and Non-Pyrogenic.
